Spares Assessment Manager

HOW CAN SAM HELP YOUR BUSINESS?

The challenge is to hold sufficient spares to meet operations whilst minimising inventory capital investment.

Epica Solution's Spares Assessment Manager (SAM) provides an indispensable technical spares assessment tool. It has been designed and developed to enable organisations to avoid the burden of unjustified or unwarranted capital investment in its MRO inventory. Although SAM is ideally suited for green and brown sites it can also be used to review and revise current stock holdings and check the validity of its initial assessments.

SAM fits neatly into Epica Solution's philosophy of "back to the basics approach". It is effortless to operate, easy to understand, yet provides a wealth of information that ensures the business is in charge of a cost effective spares acquisition program. Can your organisation afford to be without this tool?

The benefits SAM provides are:

- Saves money, avoids unjustified or unwarranted investment in MRO inventories
- Puts the organisation back in control of a cost effective spares assessment program
- Uses a unique assessment process aimed to remove user subjectivity or bias
- Minimal engineering input enabling technical personnel to concentrate on core activities
- Allows "what if scenarios" as an educational tool for inventory and engineering personnel
- Promotes and encourages a "team approach" for the acquisition program

SAM is packed with features:

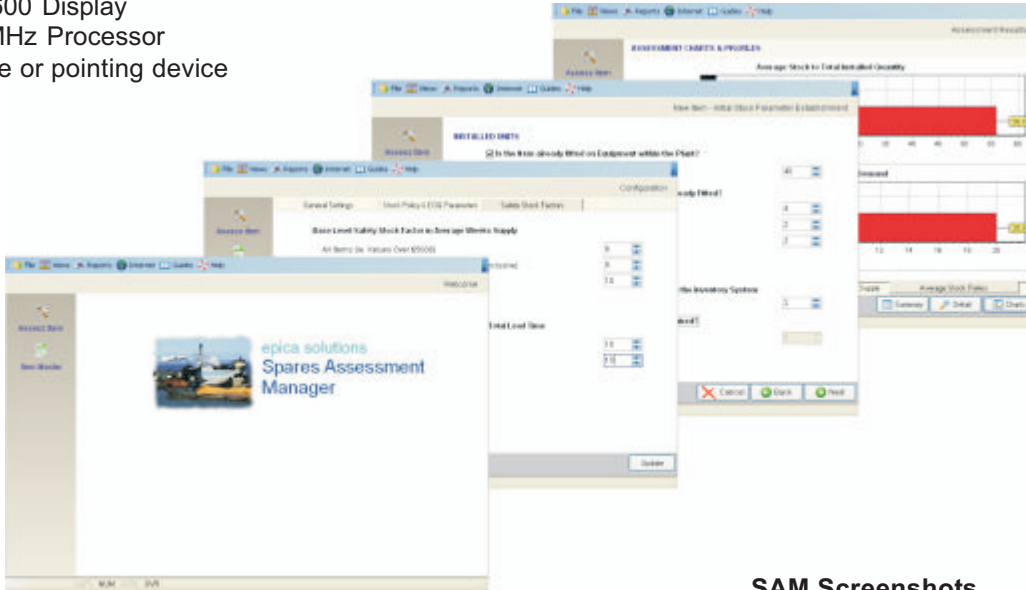

- Simple walk through assessment process
- Enables multiple assessments which can be saved for recall
- Provides a consistent methodology for the calculation of inventory control parameters
- Review and revise current stock holdings
- Production of the following recommended inventory management information:
 - Recommended Initial Buy Quantity
 - Maximum stock
 - Re-order Point
 - Safety Stock level
 - Economic Order Quantity
 - Annual Inventory Holding Cost
 - Recommended inventory control parameter
- Multiple graphical inventory profile presentation
- Password controlled Management Profile
- Configurable Management Profile to suit an organisations acquisition program
- Comprehensive documentation to assist the user:
 - Full searchable Help Files
 - Guide to assessing plant spares
 - Glossary of Inventory Management Terminology
 - Context Help on all fields
- Export and import of file data in various major system formats to upload into EAM/ERP systems
- Full backup and restore facility
- On line support services
